Emergency Management Assistance Compact Resources in California

The Emergency Management Assistance Compact (EMAC) is the Nation's mutual-aid system that provides a formal structure where all 50 States and 4 Territories have the ability to share resources across State boundaries. The Cal OES EMAC Coordinator in coordination with Cal OES Fire Branch are working together to request and coordinate needed resources via the EMAC Compact.

- The following states have EMAC resources in California:
 - Texas: 25 engines
 - Oregon: 1 Type 1 Helicopter

WEATHER OF CONCERN

Weather of Concern

- Red Flag Warning issued due to expected thunderstorms in northern Modoc County through 2300 hours today.
 - Strong, gusty winds with low relative humidity and high fire danger will likely contribute to a significant spread of new and existing fires.

Active Weather Warnings, Watches and Advisories by County:

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

For the most part, some form of a low pressure trough will be over the Pacific NW and Northern California over the next 7 days. Today's version of the trough may generate a few afternoon and evening thunderstorms, primarily over Modoc and northern Washoe Counties. The storms would most likely be a mix of wet and dry. This possibility warrants High Risk designation for those areas today. The next best chance for thunderstorms or light showers looks to be Friday in our northern areas, but this remains very uncertain at this time. Otherwise, conditions will remain dry across the region as any troughs pass through.

There will be areas of daily gusty, afternoon SW to W winds through The Delta and along and east of the Cascade/Sierra crest. The strongest afternoon gusts will mostly be 15-25 mph in those areas. Otherwise, there will be lighter, typical-speed, gusty afternoon W to NW winds for the Coast Range westward and southerly winds through the Sacramento Valley its nearby areas.

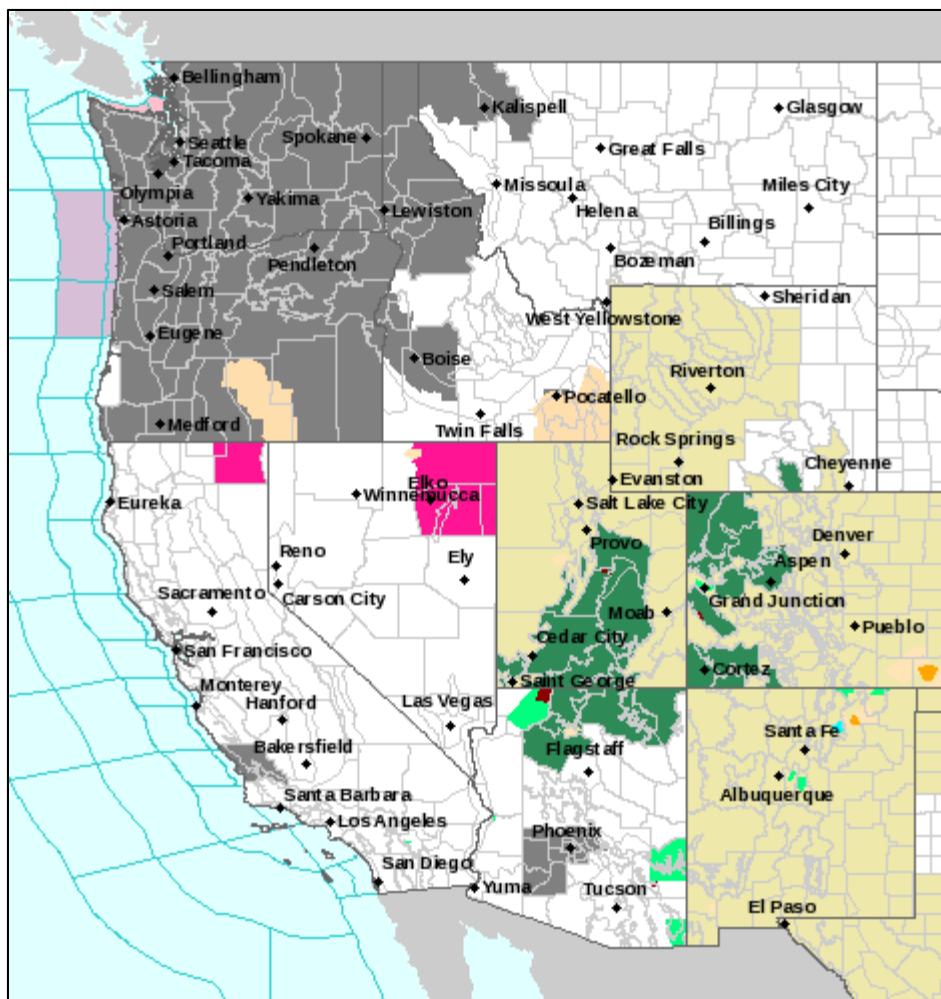

Afternoon high temperatures will be quite seasonable for the next 7 days with the warmest inland areas mostly in the 90s. Afternoon minimum relative humidity (RH) values will remain about 7-17% in the driest locations. Overnight RH recovery may improve in bottom areas somewhat, but still remain moderate while relatively poor recovery is still expected mid slope and higher.

SOUTHERN CALIFORNIA

A quiet weather pattern will persist through the week as the district will be sandwiched between high pressure over the Southwest and a deep trough over the Pacific Northwest. Onshore flow will be moderate throughout the period, resulting in night through morning stratus along the coast and breezy conditions in and near the desert. Southwest winds of 15-25 mph with gusts to 35 mph will be possible across the Kern County Mountains and Banning Pass eastward into the high desert each afternoon this week. High temperatures will be 3-5 degrees above average with readings in the mid-90s in the valley and lower foothills to 108 in the low desert. Minimum RH will be lowest this week in Central California where afternoon readings will range from 8-15% across the central coast interior and the Sierra Foothills. Isolated wet thunderstorms will be possible across the Cleveland National Forest today, but otherwise, no thunderstorms are expected through the rest of the outlook period. Slightly cooler weather and a deeper marine layer is possible toward the end of the week.

Mission:

We protect lives and property, build capabilities, and support our communities for a resilient California.

We achieve our mission by serving the public through effective collaboration in preparing for, protecting against, responding to, recovering from, and mitigating the impacts of all hazards and threats.
